

West Africa's losses of customs duties with and without the Economic Partnership Agreement (EPA) with the EU¹

Jacques Berthelot (jacques.berthelot4@wanadoo.fr), January 30, 2017

Outlook

- I Loss of customs revenues on imports from West Africa with the EPA
- 1.1 Losses on imports from the EU28-UK
- 1.2 Losses on imports from West Africa (WA) and the Rest of the World (RoW)
- 1.3 Loss on imports from EU28-UK, WA and ROW
- II GSP and MFN duties that Ivory Coast (IC), Ghana and Nigeria would have paid to the EU28-UK without the EPA

Conclusion

Annex 1 - EU28-UK exports to WA and tariff losses by groups and rates from T to T20 Annex 2 - GSP-MFN duties that IC, Ghana & Nigeria would have paid to the EU28-UK in 2015 without the EPA

The loss of West African customs revenues (CRs) on imports from both the EU and from the rest of the world (RoW) and West Africa (WA) due to the Economic Partnership Agreement (EPA) will be compared with the GSP and MFN or GSP+ and MFN import duties (IDs) that Ivory Coast (IC), Ghana and Nigeria would have paid on their exports to the EU28-UK (United Kingdom) in 2015 without the Cotonou Agreement and which they would have to pay in the future without the regional EPA or the interim EPAs of Ivory Coast and Ghana.

I - Loss of customs revenues on imports from West Africa with the EPA

Customs revenues on imports cover import duties (IDs) and value added tax (VAT) on imports, calculated on the sum of the CIF² imports value plus IDs. Net losses in customs revenues (CRs) correspond to the gap between those without the EU-WA EPA and those with the EPA³. This impact will only be assessed for imports from the EU in part I before adding the impact on internal imports from WA countries and from the rest of the world (RoW) in part II.

1.1 - Loss of customs revenues on WA imports from the EU28-UK

As the WA countries do not have reliable and up-to-date data on their CIF imports by tariff line from the EU – in fact the EU28 minus the UK (EU28-UK) given the Brexit – we are obliged to use the FOB exports of the EU28-UK according to Eurostat, to which are added the following

¹ Profoundly revised version from the last one of December 31, 2016.

² CIF (cost, insurance, freight): price of a product once arrived in the country of importation, before import duties; FOB (free on board): price of a product ready to be exported (port, airport, railway or trucks station).

³ GSP: the EU Generalised Scheme of Preferences grants to 88 developing countries (DCs) tariffs reduced by around one third of those paid by developed countries, improperly labelled MFN (Most Favoured Nation) tariffs. The GSP+ is a more preferential regime which eliminates IDs on the bulk of imports from the poorest DCs which comply with specific conditions mentioned on page 9 further on. It is close to the EBA (Eveything But Arms) regime granted to the LDCs (least Developed Countries).

four elements: the gap between the WA CIF value and the EU FOB value; the increase in imports and IDs linked to the population rise; the increase in imports and IDs linked to the trade diversion favouring imports from the EU; the impact of the value added tax (VAT) on imports, at 16% of the sum of CIF imports + IDs on imports.

The EPA schedule is established for 4 groups of products: group D for those excluded from liberalization and groups A, B and C for those liberalized from T5 (2020), with reduction rates of IDs of 0%, 5%, 10%, 20% and 35%. Imports of Group D products excluded are not prohibited but their IDs will not be reduced with the EPA.

Table 1 shows the EU28-UK FOB exports in 2015 (T time) and the IDs in the WA tariff offer according to the liberalization schedule from T5 (2020) to T20 (2035) and the different product groups: A, B and C for the liberalized products and D for products excluded from liberalization, divided into sub-groups according to their ID rates: D1 (0 or 10%), D2 (20%) and D3 (35%).

Table 1 is a summary of Annex 1 on FOB exports to WA and corresponding IDs of EU28-UK in 2015 according to the different chapters of the Harmonized System (HS) of trade classification. The excluded products taxed at 35% (D3) accounted for 3.06% of total imports in 2015 and those taxed at 20% (D2) accounted for 14.03% of the total, or 17.09% for both of them, with an average ID rate of 22.69%. Details of the EU28-UK FOB exports of the corresponding IDs by group and rate are given in Annex 1.

Table 1 - Summary of the EU28-UK FOB exports to WA and FOB import duties: 2015-35

Euros	EU exp	oorts and ID in T (201	5)	Redu	ction of WA import	duties in EU FOB	value

Table 2 below proceeds in several steps to assess the EPA's losses of customs revenues (IDs and VAT) due to the EPA related to its imports from the EU28-UK alone. The first step takes up the essence of Table 1 above.

The next step is to raise the FOB values of the EU28-UK exports to the CAF values of WA imports and to raise accordingly the corresponding IDs. For this, after an analysis of the literature⁴, the CIF values of WA imports and IDs are increased by 20% above the EU FOB values. However we are awaiting confirmation from a Nigerian journalist who studied the issue.

The third step is to take the population growth into account. After a recall of the UN projection from 2015 to 2050, we deduct the growth rates (GR) of T (2015) to T5 (2020), T5 to T10 (2025), T10 to T15 (2030), T15 to T20 (2035), and T20 to T35 (2050). In our previous EPA studies we assumed that imports from the EU would increase at a rate equal to 2/3 of the growth rate of the Regional Economic Communities (RECs) negotiating the EPAs. Checking the annual GR of imports from the EU28-UK from 2000 to 2015 shows that they increased about twice as fast as the population: by 5.77% from 2000 to 2015, compared to 2.75% population GR in WA, by

⁴ Note sur l'écart entre les prix FAB UE28-RU et CAF AO, CEMAC et EAC en 2015, SOL, 7 janvier 2017.

7.20% against 3% in the Eastern Africa Community (EAC) and by 4.84% against 2.73% in the CEMAC (Economic Community of Central Africa States). For conservative reasons for the future, we use an import GR equal to the population GR. Having asked Lionel Fontagné of CEPII by email if he took into account the population growth in his 2008 EPA study⁵, he said he did not and he did not know whether the DG Trade had done so in his Impact study of March 2016 of the WA EPA⁶.

However we assume that imports of the D3 excluded products at a 35% ID rate will cease to be imported in the future after 2015 (T time), both for imports from the EU28-UK and from the RoW, the more so as the 35% rate has only entered the ECOWAS Common External Tariff (CET) in 2015 and has been implemented in only a few Member States. It is also estimated that the D2 excluded products taxed at 20% will increase at half the growth rate of the population, for imports from the EU28-UK as for those from the RoW. On the other hand, imports of products excluded from sub-group D1 taxed at 10% or untaxed would continue to increase at the same rate as the population, such as the liberalized imports of groups A, B and C.

Naturally, the IDs will increase in parallel with imports of the liberalized product groups ABC and the subgroups D1, D2 and D3 of the excluded products.

As for trade diversion, after consulting several studies, for conservative reasons we will assume the rate of 20% instead of the 32.5% in the impact study of Lionel Fontagné et al. on EPAs that we had already reduced to 25% in our previous analyzes. Indeed, questioned on the big difference between his estimate of 32.5%, which he confirmed, and that of the DG Trade impact study of 4.1%, Lionel Fontagné replied that this is due, among other reasons, to the difference between the econometric models used: of partial equilibrium in his study of 2008 with data of 2002-04 and of general equilibrium in DG Trade's study with data of 2014. This huge difference between these two studies, to which David Laborde of IFPRI has contributed, is not conducive to accredit impact studies based on these models! We also assume that imports from the EU28-UK of the D1 subgroup taxed at 10% or untaxed would continue to increase at the same rate as those of liberalized products of groups ABC and that they would also participate to trade diversion. We can then deduct the ID losses on these diverted imports.

The next step concerns the calculation of the VAT on imports of liberalized and excluded products, which is of 16% of the sum of imports (after diversion) and IDs.

The next step concerns the calculation of IDs and VAT in the absence of EPA. In this case, there is no longer any need to distinguish between IDs according to the groups of liberalized and excluded products and the average ID of 10.73% is applied to all imports of WA from the EU28-UK in 2015.

Finally we can compare the losses of customs revenues (IDs + VAT) with and without the EPA. The first years of liberalization the VAT receipts on imports are rising with the increase in imports and IDs linked to trade diversion in favour of the EU, so that the annual and cumulative impact of these imports leads to gains, not losses, of customs revenues (negative losses correspond to gains).

But the loss of customs revenues due to trade diversion to the detriment of imports from within WA and the Rest of the World (RoW) would increase total losses from the beginning in T5.

1.2 - Loss of customs receipts on WA imports from within WA and the RoW

In the absence of detailed data per tariff line on WA imports from within WA and the RoW, the same distribution as that of EU28-UK imports in 2015 is used between ABCD1 products (82.91%), D2 products (14.03%) and D3 products (3.06%).

Table 4 shows that, according to UNCTAD, 26.2% of total WA imports came from EU28-UK in 2015, 9.3% were intra-WA and 64.5% came from Rest of the world (ROW), of which 3.1% from the UK. Of the 2010-15 average, 27% came from the EU28-UK, 10.1% from intra-WA and 62.9% from the RoW (3.7% from the UK). We will stick to the data for 2015.

Table 4 - Total West African imports by group of exporting countries, 2010-15

Source: UNCTAD (http://unctadstat.unctad.org/wds/TableViewer/tableView.aspx); OECD: euro-dollar exchange rate

These UNCTAD data on CIF imports from the EU28-UK (€23.551 billion) are significantly lower than those of Eurostat for the EU28-UK FOB exports (€26.595 billion) when they should be much larger but this undervaluation is shared by both the ITC TradeMap database and Comtrade, the United Nations trade database and UNCTAD's primary source. As we cannot rely on such absolute data from UNCTAD, we can at least consider as more reliable the relative distribution of UNCTAD data among groups of countries, that we will apply to Eurostat data.

In other words the €31.263 billion in WA CIF imports from the EU28-UK in 2015 accounted for 26.20% of WA total imports, which therefore amounted to €119.309 billion, of which €11.096 billion came from within WA (9.30%) and €76.954 billion (64.50%) from the RoW (of which €3.699 billion or 3.10% from the UK). However, if the imports of D3 products taxed at 35% are capped and if those of D2 products taxed at 20% would be halved in the future, the WA total imports would be of €108.293 billion and the share of those imported from the EU28-UK increases at 28.61%. In fact, by adding the €5.911 billion of trade diversion in T5 to the detriment of imports from within-WA and the RoW, the share of the EU28-UK imports increases at 33.41% of total imports as shown in Table 5.

The €5.911 billion of trade diversion are allocated between intra-WA imports and the RoW in proportion to their relative shares in total imports from the EU28-UK in T5 (2020), i.e. 8.07% and 91.93%. As the IDs' rate on imports of ABCD1 groups was 8.27% in 2015, we can deduct the loss of IDs and VAT on imports from the RoW and the VAT on 50% of intra-WA imports (there is no IDs within ECOWAS, hence within WA).

To the extent that the WA's CET (common external tariff) applies to all its imports in 2015 and not only to those coming from the EU28-UK, we assume, owing to the lack of detailed data per tariff line on imports coming from the RoW, that the average IDs rates on imports from the EU28-UK (including of group D products excluded from liberalization) apply to imports from the RoW. However, the average rate is reduced to 9.97% once excluded the D3 imports for the future. This will correspond to €8.265 billion, except of course for imports from the EU28 and intra-WA, on half of which however is applied the VAT (according to Lionel Fontagné et al.). The VAT on imports from the RoW was of €13.635 billion (16% of CIF imports + IDs on imports of €85.219 billion), while the VAT on 50% of intra-WA imports was of €888 million (there is no IDs between the WA member States).

Table 5 breaks down WA total imports coming, in addition to EU28-UK, from WA and RoW, distinguishing between ABC products and subgroups D1, D2 and D3 of products excluded from liberalization.

Numerous calculations make it possible to identify the net losses of IDs and VAT on imports from the RoW and from trade diversion due to the fact that there is no ID on intra-WA imports on which the VAT is levied on only about 50% of them. Finally, the net loss of IDs + VAT − the difference between the IDs + VAT received without and with trade diversion − rose from €1.410 billion in T5 to €2.027 billion in T20 and €2.784 billion in T35.

Finally we calculate the IDs and VAT receipts on imports from the RoW and intra-WA which will not be affected by trade diversion.

3.1 - Customs losses on WA imports of from the EU28-UK, WA and the RoW

Table 6 adds the annual and cumulative losses of customs revenues (IDs + VAT) incurred on WA imports from the EU28-UK related to the lower imports from WA and the RoW due to trade diversion for the benefit of the EU28-UK.

Table 6 - Losses of customs revenues on WA imports from EU28-UK, WA and the RoW

€ million	T	T5	T10	T15	T20	T35
Annual losses	0	98,9	1218	2942	4606	7114
Cumulative losses	0	98,9	2933	14069	33474	121272

Table 7 shows the annual and cumulative losses per year from 2020 to 2050.

Table 7 – WA net losses of IDs and VAT on import from the EU28-UK with the EPA

€ million	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Annual	98,9	163,4	270	446,1	737	1217,7	1452,6	1732,8	2067,1	2467	2941,9
Cumulative	98,9	262,3	532,3	978,4	1715,4	2933,1	4385,7	6118,5	8185,6	11127,5	14069,4
	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041
Annual	3217,9	3519,7	3849,8	4210,9	4606	4741,4	4880,8	5024,3	5172	5324,1	5480,6
Cumulative	17287,3	20807	24656,8	28867,7	33473,7	38215,1	43095,9	48120,2	53292,2	58616,3	64096,9
	2042	2043	2044	2045	2046	2047	2048	2049	2050		
Annual	5641,7	5807,6	5978,4	6154,1	6335	6521,3	6713	6910,4	7114		
Cumulative	69738,6	75546,2	81524,6	87678,7	94013,7	100535	107248	114158,4	121272,4		

As the loss of customs revenues on imports from WA and the RoW was initially higher than the gains (negative losses) recorded in the first years on imports from the EU28-UK, the annual losses rose from €98.9 million in T5 (2020: beginning of liberalization) to €4.606 billion in T20 (2035) and €7,114 billion in T35 (2050). As a result, cumulative losses jump to €2.933 billion in T10 (2025), €14.069 billion in T15 (2030), €33.474 billion in T20 (2035) and €121.272 billion in T35 (2050).

However the bottom of Table 5 shows that the annual losses due to trade diversion in favour of imports from the EU28-UK and to the detriment of imports from the RoW and intra-WA do not concern the remaining imports from the RoW and of WAs not affected by trade diversion. These customs revenues remain substantial but, if the percentage of losses due to the EPA is of only 0.77% of total WA customs revenues in T5, it then climbs to 9.20% in T10, 32.36% in T15, 34.60% in T20 and 42.12% in T35.

Table 8 – Share of IDs+VAT losses in the EPA of total WA customs revenues

	T	T5	T10	T15	T20	T35
Losses of IDs+VAT due to the EPA	0	98,9	1218	29429	4606	7114
Revenues of IDs+VAT not affected by EPA	9308	12884	14412	16102	17919	24003
Total revenues of IDs+VAT with EPA	9308	12785,1	13194	13160	13313	16889
% of EPA losses in total IDs+VAT revenues	0	0,77%	9,2%	22,36%	34,60%	42,12%

These losses will only materialize if the regional WA EPA is implemented, which seems unlikely since Nigeria, The Gambia and Mauritania have not even signed it. But now that Ghana and Ivory Coast have ratified and implemented their interim EPAs (iEPAs) and that the European Parliament has also ratified them, the other WA States should impose IDs on their imports from these two countries from T5 on in order not to be invaded by the products of the EU28-UK which they will import duty-free. These IDs to be paid to the rest of the WA by Ghana and Ivory Coast would be very large, even higher for Ivory Coast than the GSP and MFN duties they would have had to pay on their exports to the EU28-UK if they had not implemented their iEPAs, at least if they would be excluded from ECOWAS.

<u>II – GSP-MFN duties that Ivory Coast, Ghana and Nigeria would have paid to the EU28-RU without the WA EPA</u>

Table 9 summarizes the Annex 2 detailing the GSP and MFN IDs as well as the GSP+ and MFN IDs that IC and Ghana should have paid on their exports to the EU28-UK in 2015 – and that Nigeria has paid – if they did not benefit from the Cotonou regime and which they would have paid in the future if they had not ratified and implemented their interim EPAs.

Table 9 – GSP and GSP+ and MFN IDs to pay to the EU28-UK in 2015 without Cotonou or EPA

Source: Eurostat and TARIC

The exporters of these 3 developing countries would have paid €167.7 M in GSP and MFN IDs, which, however, represented only an average rate of 0.75% of their imports from the EU28-UK. 96.55% of these IDs relate to agricultural and fish products of chapters 01 to 24 of the Harmonized System (HS) of Trade Classification, of which 99.90% for IC, 96.87% for Ghana and only 51.74% for Nigeria. 85.9% of these IDs (€144 M) relate to 3 agricultural products: processed cocoa (€76 M), canned tuna (€38.3 M) and fresh bananas (€29.8 M). Detailed data are available in the studies specific to each of these three countries.

On the other hand, if these 3 countries had requested to the EU and obtained the GSP+ status, they would have paid almost 4 times less IDs (€45.8 M), of which €41.7 M on agricultural products, particularly fresh bananas from IC and Ghana (€29.8 M), aluminium from Ghana (€2.663 M) and hides and skins from Nigeria (€1.420 million), the only two products outside chapters 01 to 24. And the GSP+ IDs would even fall to €33.5 M by 2020 if IC and Ghana could get an alignment of their IDs on bananas on those granted to the Andean and Central America countries having signed since 2012 bilateral free trade agreements with the EU: from €111/tonne in 2015 to €75/tonne in 2020, while it will stay at €127/tonne (MFN level) for ACP countries without EPAs. Moreover, these €48.5 M of GSP or €33.5 M of GSP+ and MFN IDs could be financed by a Regional Solidarity Fund proposed by the civil society in Dakar in January 2015, for which IC would only have to pay 9.4%, i.e. €3.149 M⁷!

_

⁷ Taxe anti-APE sur les exportations extra-Afrique de l'Ouest, Solidarité, janvier 2015 : https://www.sol-asso.fr/articles-de-2015/

Getting the GSP+ status for Ghana, IC and Nigeria should not pose a legal objection since they have now signed or ratified the 27 international conventions required⁸ and since they fulfil the criteria of economic vulnerability, which was confirmed by an e-mail of DG Trade of 13 June 2016. But the EU twice refused to accept Nigeria's request, the first time in 2007, with a refusal in 2008 because it had not ratified the International Convention on Genocide, which it did in 2009 when the EU Commission did not even answer to Nigeria's new request. Granting the GSP+ to Nigeria would have ruined DG Trade's goal to impose the regional EPA. Refusing to grant GSP+ status to Nigeria was at the same time a way of pressuring IC and Ghana not to request this status but to ratify instead their iEPAs pending Nigeria's signature on the regional EPA. But Nigeria has repeatedly asked the European Institutions, particularly with President Muhammadu Buhari's address to the European Parliament on 3 February 2016 to amend certain provisions of the regional EPA which would hamper its major objective of industrialization. Trade Commissioner Cecilia Malmström has once more been adamant on this demand⁹, which is not the best way to get Nigeria come to terms.

Conclusion

If we compare the GSP duties to pay on exports of IC, Ghana and Nigeria to the EU28-UK, and a fortiori those of the GSP+, in the absence of the Cotonou regime or EPA, with the losses of IDs and VAT that the AO will suffer from T5 (2020) on with the EPA these will exceed the GSP IDs from T7 (2022) and would be four times higher than the GSP+ IDs already in T5.

As WA exports to the EU28-RU are much more likely to fall than to increase due to both the stagnation and aging of the EU population and the WA declining competitiveness on the EU market following its multiple free trade agreements, all this underscores the blindness of IC and Ghana in ratifying and implementing their interim EPAs and the wisdom of Nigeria in refusing to sign the regional EPA. Let us add all the other good reasons for not doing so, summarized in a document of December 11, 2016¹⁰.
